

Prem Madishetty

(369) 210 7491 | San Francisco, CA, 94103 | prem131298@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Cybersecurity professional with 4+ years securing Fortune 200 critical infrastructure across SOC operations, threat detection, incident response, and vulnerability management. Drove SLA from 89% to 99.5%, prevented \$28M+ in breach costs, and cut MTTD by 35% through SIEM tuning and SOAR automation. Bridging enterprise SOC expertise with next-generation capabilities in post-quantum cryptography, AI red teaming, and DevSecOps to drive scalable security programs at the leadership level.

SKILLS

- **Security Operations & SIEM:** SOC, Alert Triage, Threat Detection, IBM QRadar, Splunk, Palo Alto XSOAR, CrowdStrike Falcon.
- **Threat Detection & Incident Response:** Threat Hunting, IOC/TTP Analysis, MITRE ATT&CK, Autopsy, Forensic Reporting, Escalation.
- **Vulnerability Management & Endpoint Security:** Tenable, IDS/IPS, Forcepoint DLP, Proofpoint, INKY, EDR, Penetration Testing.
- **Identity, Cloud & Network Security:** Active Directory, AWS (EC2, VPC, IAM, GuardDuty), Zscaler, Palo Alto Firewall, HashiCorp Vault.
- **GRC, DevSecOps & Automation:** NIST 800-53, ISO 27001, SOC 2, HIPAA, GDPR, Terraform, Trivy, Kyverno, Python, Bash, ServiceNow.

EXPERIENCE

Cybersecurity Engineer

San Diego State University, AI4Business Lab

Oct 2024 – Present

San Diego, CA

- Implemented DevSecOps **Container Security** pipeline using Trivy and Kyverno, detecting 50+ vulnerabilities and blocking non-compliant workloads across 3 clusters and integrated SBOM generation and image signing to *reduce container attack surface by 40%*.
- Engineered **automated threat intelligence pipeline** using n8n, ingesting OSINT feeds and enriching Indicators of Compromise via VirusTotal, pushing verified IOCs and TTPs to firewall blocklists and SIEM in real time reducing manual *threat intel processing by 70%*.
- Provisioned **Infrastructure as Code** in Windows and Linux environments using Terraform and Checkov, enforcing Zero Trust, CIS-aligned baselines, least-privilege IAM to remediate *100+ misconfigurations*. Managed state in Git, reducing provisioning time by 60%.

Senior SOC Analyst

NextEra Energy

May 2023 – July 2024

Miami, FL

- Administered **IBM QRadar** and **Splunk**, tuning 15+ correlation rules to reduce false positives by *30% across 500+ daily alerts*. Reduced alert noise and accelerated *MTTD* by suppressing repetitive alerts, allowing trusted entities and baselining normal behavior.
- Engineered and maintained 10+ **Palo Alto XSOAR** playbooks orchestrating ServiceNow, AWS, Tenable, Forcepoint and Proofpoint. Built 3 playbooks for IAM, VM and phishing alerts, automating *2,000+ alerts/week*, reducing resolution time by *30% across 6 queues*.
- Directed **Vulnerability Management** lifecycle across 3,000 assets using Tenable, triaging 40 tickets/week and coordinating patch teams to get *80% critical vuln closure in 30-day SLA*. Reported weekly findings to leadership via dashboards and business leaders call.
- Managed Palo Alto **IPS/IDS** signature updates with custom and vendor-approved signatures by executing 4 weekly CAB-approved changes to strengthen security posture across a *Fortune 200 critical energy infrastructure* against emerging and zero-day threats.

SOC Analyst

NextEra Energy

May 2021 – April 2023

Miami, FL

- Owned **IR lifecycle** across 6 ServiceNow queues in a *24x7x365 rotational environment*, driving SLA compliance from 89% to 99.5%. Triaged *P1/P2 incidents* with users, vendors & stakeholders on live bridges, executed *emergency changes* and delivered RCA reports.
- Monitored **Forcepoint DLP** across email, print, and RSD channels, auditing 120 cases/week for known-leaver policy violations. Escalated *7 exfiltration attempts* of PII, financial data and trade secrets averting an estimated *\$28M+ in potential per breach cost*.
- Authored daily **CTI reports** for leadership, extracting IOCs, TTPs, and patch recommendations from OSINT and vendor intelligence. Translated intelligence into firewall blocklist updates and SIEM rules to neutralize threats across a *\$20B critical infrastructure*.

TECHNICAL PROJECT

T-Pot Honeypot Deployment on AWS

- Deployed T-Pot on **AWS EC2/VPC** capturing **150K+** attacks in 7 days, mapping TTPs to the full **MITRE ATT&CK** framework.
- Built ELK dashboards for real-time threat visualization and automated IP blocklist generation to cut manual triage time by 60%.
- Configured IAM policies and VPC isolation across 3 security layers to harden the deception environment against lateral escape.

Lattice-Map: Quantum-Safe Cryptographic Scanner

- Developed a zero-dependency static analysis scanner to quantify cryptographic compliance risks and structural tech debt.
- Mapped 12 distinct dependency graphs against **NIST PQC** migration pathfinding models to optimize technical asset security.
- Generated 15 structured compliance reports and documentation logs detailing technical remediation steps for stakeholders.

EDUCATION

San Diego State University

Master of Science in Cybersecurity Management

San Diego, CA

GPA: **3.83/4**

Publication: "[Automatic Remote Farm Irrigation System with WSN and Weather Forecasting.](#)" *J. Phys.: Conf. Ser.*, vol. 2161, 012075, 2022.
